# Surface Engineering

Edited by

**P.K. Datta, *University of Northumbria at Newcastle*****J.S. Gray, *University of Northumbria at Newcastle***

This title is published in three highly illustrated volumes and covers the latest developments in the subject. It provides a unique combination of the science of coatings and surfaces, the technologies of deposition, surface modification and analysis, and practical applications. The three volumes provide a useful and comprehensive blend of reviews and state-of-the-art papers, written by international experts, and reflect the current status of and likely future advances in surface engineering.

## **Surface Engineering Volume I: Fundamentals of Coatings**

This volume considers principles of coating/substrate design in aqueous and high temperature corrosion, and wear properties, scanning the coatings spectrum from organic, through metallic to ceramic. The emphasis in this volume is on the science and design of coatings and substrate systems rather than on technology.

**Hardcover**      **ISBN 0 85186 665 4 (1993)**      **xvi + 370 pages**      **Price £52.50**

## **Surface Engineering Volume II: Engineering Applications**

Volume II is dedicated to topics concerning the performance of coatings and surface treatments embracing four main areas: the inhibition of wear and fatigue; corrosion control; application of coatings in heat engines and machining; and qualities and properties of coatings.

**Hardcover**      **ISBN 0 85186 675 1 (1993)**      **xvi + 342 pages**      **Price £52.50**

## **Surface Engineering Volume III: Process Technology and Surface Analysis**

Volume III has two thrusts as indicated by its title: process technology and surface analysis. Both areas are central to surface engineering and each holds particular promise, not only for improvement in existing types of coatings performance, but also in the design, development and evaluation of totally new coating/substrate systems.

**Hardcover**      **ISBN 0 85186 685 9 (1993)**      **xvi + 312 pages**      **Price £52.50**

**Special Package Price (Volumes I–III) £140.00 – save over 10%!**

# Issues in Environmental Science and Technology

Editors: **R E Hester**, *University of York, UK*  
**R M Harrison**, *University of Birmingham, UK*

## *A new series to tackle important environmental issues . . .*

In response to the rapid growth of interest in the environment and the acute need for concise, authoritative and up-to-date reviews of topical issues, the Royal Society of Chemistry is launching **Issues in Environmental Science and Technology**.

This new series will publish review articles on topics of global concern, written by world experts in their specialized fields. It will present a multidisciplinary approach to pollution and environmental science and in addition to covering the chemistry of environmental processes, will focus on broader issues such as economic, legal and political considerations.

Each issue will address a different theme and will contain approximately six articles, most of which will be specially commissioned by the editors.

### **The first two issues will cover:**

## **1 Mining and its Environmental Impact**

**ISBN 0 85404 200 8 April 1994  
Price £15.00**

## **2 Waste Incineration and the Environment**

**ISBN 0 85404 205 9 July 1994  
Price £15.00**

**Also Available** ISSN 1350-7583  
**on subscription . . .** EC £25.00 USA \$47.00

Published twice yearly from 1994  
Canada £28.00 + GST Rest of World £27.00
